Top 10 Countries: GDP vs Life Expectancy

- ▶ The bar chart showcases the top 10 happiest countries, comparing GDP per Capita and Healthy Life Expectancy.
- ▶ We observe that countries with high economic performance often also report higher life expectancy.
- ▶ This implies that wealthier nations are not only more prosperous but also provide better healthcare and quality of life to their citizens.

Top 10 Countries: GDP vs Life Expectancy

Correlation Heatmap: What Drives Happiness?

- ▶ The correlation heatmap reveals strong positive relationships between Economy (GDP per Capita) Health (Life Expectancy), and Happiness Score.
- ▶ Family and Freedom also show notable correlations.
- ▶ This indicates that economic prosperity, health, and strong social support are among the top predictors of a happier life.

Correlation Heatmap

GDP vs Happiness by Region

- ▶ The scatter plot breaks down the GDP-Happiness relationship across regions.
- ▶ Western Europe and North America exhibit both high GDP and high happiness, while Sub-Saharan Africa and parts of Asia cluster toward the lower end.
- ▶ This reinforces the idea that regional development disparities play a significant role in overall life satisfaction.

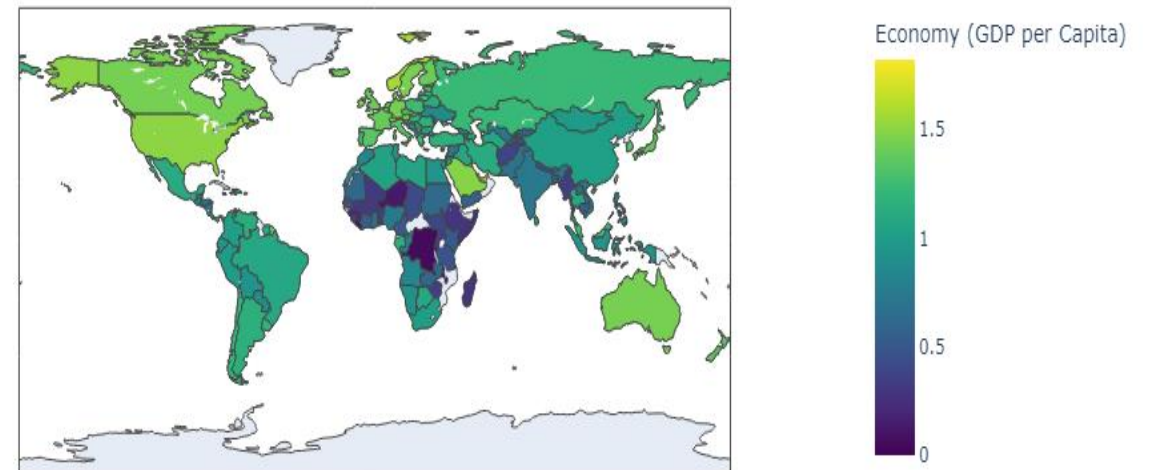

GDP vs Happiness Score by Region

Global GDP Map with Life Expectancy

- ▶ The interactive world map highlights GDP per Capita by country, with Healthy Life Expectancy available via hover tooltips.
- ▶ Wealthier nations are concentrated in the Northern Hemisphere, and richer countries like Switzerland, Denmark, and Canada also lead in life expectancy.
